

PROJECT MANAGEMENT-INDIVIDUAL CONTRIBUTION

All the members in the group contributed equally.

*Items not applicable:

1) Integration testing:

- This section is not applicable for our project at this point as we have no cross-platform implementation with desktops and smartphones.
- As this was the first demo, we have created the data set using mathematical model for our project and are currently working on data analytics. Once the analysis is done, we would be able to integrate all the modules and do integration testing.
- For the dataset created, we have included the unit testing for separate modules in our documentation, since unit testing is independent.

We would like to suggest that the points for integration testing may be allocated to data collection for our project, since our project depends on accuracy of the data required to perform analysis. Finding reliable data, creating datasets and implementing the mathematical models was a complex task.
